## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Inana et al. (U.S. Patent No. 5,128,770).

In the embodiment of Fig. 5 the top of the non-illustrated tripod is the base section; unit 240 is the pan section, motor 242 is the pan motor; elements 244-264 are pan torque transfer means; unit 218 is a tilt section; motor 220 is a tilt motor; and elements 222-217 are torque transfer means. Note that the pan motor 242 is in the rotated part for the pan function and that the tilt motor is the rotated part for the tilt function. At least some of the gears in the units 218 and 240 are spur gears. Gear 258 is a pan end gear fixed to the base section (the tripod) and a gear 238 is a tilt end gear and it is fixed with respect to the pan section via the shaft 217. The reduction gears shown in units 218 and 240 appear to be the same and thus an individual gear could have been provided in either unit and are thus “used in common with each other”. The claimed structure is fully met by the embodiment of Fig. 5. Note the embodiment of Fig. 16 is quite similar to that of Fig. 5. The claims are similarly fully met by the embodiment of Fig. 16.
